Nominal grid: discrete trade-offs
Terminal electrical input (W)
Actually attained die temperature (K)
0 K/W
0.5 K/W
1 K/W
2 K/W
5 K/W
10 K/W
Target neighborhood: actual points only
Terminal electrical input (W)
Actually attained die temperature (K)
Stars: <=200 K nondominated grid points within each sink scenario. Open diamonds: bounded actual target solves.
