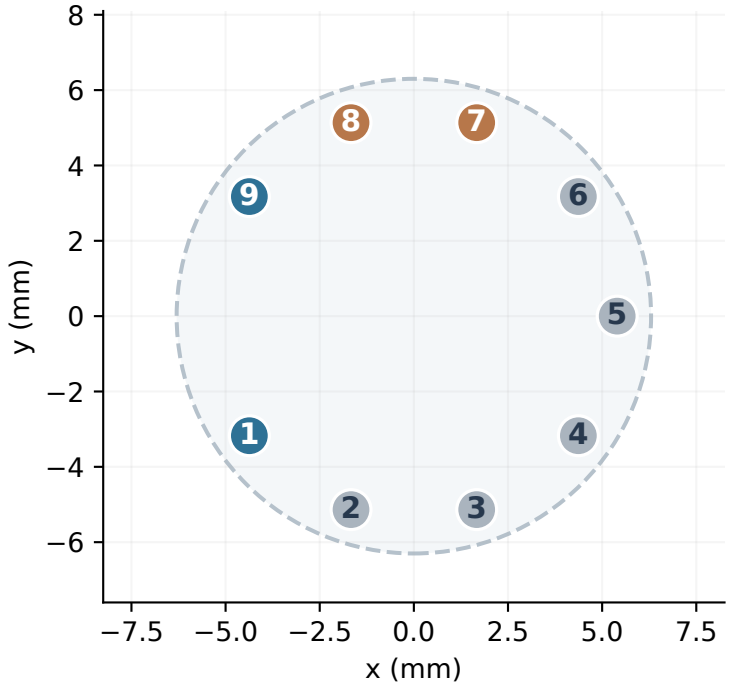
Nine-pin TO header: circuit assignments

Source-derived pin coordinates | Separate TEC and detector electrical paths

Source-CAD top-view pin centers



Two independent electrical circuits

Thermoelectric cooler

Pin 1 → 88 P/N thermoelectric legs → Pin 9

Three stages; 29 / 11 / 4 couples

Terminal current: 0.400 A (nominal model)

HgCdTe photoconductor

Pin 7 → detector electrical path → Pin 8

Separate from TEC electrical power supply

Detector bias polarity is not specified here

Dashed circle: location guide only, not the machined flange. Pin polarities and actual lead harness are not asserted.
